Plant List

Erica Vagans Mrs. D. F. Maxwell

L. N. ROBERSON CO.

1540 East 102nd Street

Vermont 1189

Seattle 55, Washington

GREETINGS, CUSTOMERS!

OUR NURSERY offers the following as a means of letting the public know what type of plants we raise. Many names are omitted for lack of space but we will always be glad to have you write or call about other species which we may have in small quantities.

Visitors are always welcome but our small staff makes it impossible for someone to be available at all hours, so we suggest, for your convenience as well as ours, that you telephone first when planning a visit to us, especially when coming from any great distance. Closing time—4:30 P. M.; open Sundays by appointment only.

Mail orders are given prompt attention although shipping is limited to once or twice a week. Packing for shipment is gratis but PARCEL POST or EXPRESS charges are to be paid by the customer as is the RETAIL SALES TAX for Washington customers and these amounts should be included in your check or money order. No mail order under \$2.00, please!

We attempt to name plants correctly but no guarantee is expressed or implied. Growing conditions affect plants so much that they may look entirely different in your garden than they did in the nursery. They leave us in good condition and should do well if properly grown. The very fact that our supply of a certain size or type of plant may be exhausted before the season passes makes it impossible to assure mail order customers that we can meet all demands so it is always advisable to state whether you wish a substitution or a refund in case we cannot fill the order as sent.

In order to give the most information possible in the least space, each plant name is followed by the color of the flower, ultimate height or height of blossom—whichever applies, and approximate time of flowering. All plants with the exception of "rooted cuttings" are ready to set out into the garden although different groups may vary in maturity. A dwarf shrub is comparatively young and small at three to five years while an herbaceous perennial should be divided and reset that often.

Rock Plants

A good rock garden demands special attention to the soil when planting. Sandy loam, peat moss and well rotted manure in equal portions provide a good base soil for general use. Plants with special requirements may have other ingredients added.

Be sure no air pockets are left when working with the soil, either when the rocks are set or when plants are put in. The plant roots should be firmed well at the time of transplanting and after any freezing weather which might cause them to be heaved from the ground. Such plants as dianthus and saxifrage profit from having the dead blossoms removed after flowering unless seed is desired.

SENECIO CINERARIA—Dusty Miller—gray foliage25
SILENE SCHAFTA—rosy pink, 6", Autumn25
SISYRINCHIUM BELLUM—Blue Eyed Grass—8", May35
SPIREA BULLATA—deep rose, 15", July50
SPRAGUEA MULTICEPS—white to pink, low, May35
SYNTHYRIS RENIFORMIS—dark blue, 6", March50
VERONICA CUPRESSOIDES NANA—bright green shrub		1.00
V. HECTORI—wiry branches, inconspicuous flowers		1.00
V. GUTHERIANA—blue, 8", Summer50
V. RUPESTRIS—bright blue, trailing, Summer35
V. RUPESTRIS NANA—lighter blue, 3", June50
V. RUPESTRIS ROSEA—lavendar pink, 3", June50
VIOLA ODORATA ROSINA—old rose, 4", April35
V. ODORATA THE CZAR—white, 4", April35

Saxifrages in a Rock Garden (top)

Showing the distinction between the two most common heaths.
Erica on the left with small needles and *Calluna*
 on the right with overlapping bracts.

Heathers

Year round color of flower and foliage are offered by the heaths. The soil for them should abound in peat moss; may be neutral or slightly acid; and, should contain plenty of well rotted manure. Prune heathers after flowering to keep plants low and compact.

BRUCKENTHALIA SPICULIFOLIA—pink, 8", June	50c and \$.75
CALLUNA VULGARIS ALBA—white, 15", Summer.....	.50
C. V. ALPORTI—red purple, 18", August50

Dwarf Brooms

Brooms like sunny banks and crannies where the soil is not particularly rich. Their gay flowers brighten the scene in late spring and early summer.

CYTISUS DECUMBENS—bright yellow, prostrate, June.....	\$2.00
C. PURPUREUS—purple mauve, 18", May.....	50c and 1.00
GENISTA HORRIDA—yellow, 10", Summer.....	\$1.00 and 1.50
G. RADIATA—bright yellow, 2', Summer.....	.50
G. SAGITTALIS—butter yellow, procumbent, July.....	.75

Rhododendrons and Azaleas

Acid soil and plenty of water in late summer during the growing season will help to keep these choice shrubs in good health. To acidify neutral or alkaline soil use a pound of sulphur to 100 sq. ft. Dwarf rhododendrons and azaleas are particularly desirable for rock garden use since they are very slow growing.

AZALEA BALSAMINAEFLORA—double orange red, 8", May	\$.50
A. FLAME CREEPER—single orange red, 4"	75c and 2.00
A. HINODEGIRI ALBA—white, 15", May	1.00
A. HINODEGIRI FLAME—orange, 15", June75
A. HINODEGIRI PINKIE—light pink, 12", June75
A. POUHKENENSIS—purple, 20", June	50c and 1.00
A. SCHLIPPENBACHI—shell pink, 4', June	5.00
RHODODENDRON DAPHNOIDES—rose, 2', May	75c and 2.50
R. FASTIGIATUM—light purple, 2', April	75c and 2.50
R. FERRUGINEUM—Alpine Rose—carmine, 1'	2.00
R. HIRSUTUM—rose, 2', May	2.50
R. IMPEANUM—lavendar, 10", April75
R. IMPEDITUM—mauve, 15", April, gray leaves	2.50
R. MUCRONULATUM—rosy lavendar, 3', February	5.00
R. RACEMOSUM—clear pink, 4', April75
R. RUBIGINOSUM—mauve, spotted brown75

Azalea Hinodegiri Alba

Rhododendron Racemosum

Camellias

AKEBONO—rose, semi-double	\$.75, \$2.50 and \$7.50
BELLE ROMANO—striped red and white	75c, \$2.50 and 7.50
FANNY BOLLIS—red and white	7.50
JARVIS RED—tufted center	75c and 2.50
JORDAN'S PRIDE—pink edged with white.....	75c and 7.50
LITTLE CHEERFUL—red75
PURITY—very formal white75
SASANQUA ALBA—single, white75
SASANQUA ROSEA—Briar Rose75
SNYDER WHITE—similar to PURITY75
THEA SINENSIS—Tea Plant75
WAKANOURA—red	7.50

Double Camellia

Conifers

Sun and moist sandy soil suit the dwarf spruce (*Picea*) and juniper best while the majority of the other conifers in this list prefer richer soils, more moisture, and as much sun. There are suitable forms for every location in the rock garden and, if you have never used these low growing shrubs, you have missed an opportunity for interest and accent.

NOTE: Colors in descriptions refer to foliage rather than flowers.

ABIES LASIOCARPA—narrowly conical tree.....	\$3.50
A. NOBILIS—thin, soft foliage; symmetrical.....	3.50

Primula Cashmeriana

Aquilegia Chrysantha

Perennials

Few plants require less attention for the return given than the tall perennials which are used in borders and beds for summer color and which provide such quantities of cut flowers if well fertilized. Most of them prefer a sunny location.

AGROSTEMMA FLOS JOVIS—bright pink flowers, woolly leaves ...	\$.25

HARRINGTON'S PINK—3'
MRS. FRANCES CHILDERS—carmine rose, 4'
FRIKARTI—blue, very long season, 2'

Formal Garden using Dwarf Box (Buxus Suffruticosus)

Cypripedium Spectabile

Ladyslippers

The Ladyslippers are woodland denizens requiring leaf mold and chopped fern root to make them happy. A small amount of heat in the greenhouse will force them into bloom in March or they may be planted outside and left alone for later flowering. Their natural enemies are field mice, quail and pheasants from which a screen basket will offer some protection.

CYPRIPEDIUM ACAULE — rose35
C. PUBESCENS — yellow and brown35
C. SPECTABILE — pink and white35

Miscellaneous

ASARUM CAUDATUM—Wild Ginger—Collected plants	\$.25
FELICIA ROTUNDIFOLIA—Agatheia—tender plant for rock garden or border—sky blue fls.25

Seeds

Seeds are not our specialty but some of our own are gathered and some collecting in the wild is done. We will be glad to receive your requests.

Creepers and Ground Covers

Many banks and narrow strips of ground which are unsatisfactory when planted in lawn become a source of great pleasure when planted with one or more of these low spreading plants. Requirements differ according to the plant. Those which are happy around and under ericaceous plants such as rhododendrons and azaleas are marked with an asterisk.

		per Flat
ACAENA MICROPHYLLA—fine leaves, crimson in Autumn	\$.25	\$2.50

VINCA MINOR—Myrtle—blue, white or red purple	.25	2.50

Creeping Thyme

Water Plants

A well planned pool will not only have water lilies, whose flowering season is short, but will contain bog and other water plants to lengthen the season of bloom and will also have some submerged oxygenating plants for the fish. Snails are good scavengers and will complete the balance of the water garden.

AZOLLA—Water Fern—per portion.....	\$0.10
ANACHARIS—Elodea—Fish Greens—per bunch.....	.25
BOGBEAN—large trifoliate lvs.....	.25
CATTAIL—6 ft., usurps all space available.....	.25
